

Program Specification

Array Average

1 PROGRAM DESCRIPTION

Write a program that reads float values and prints the average.

2 INPUT DESCRIPTION

Prompt accordingly the user and take in keyboard input using the Scanner class. Stop accepting new data when a 0 is entered.

3 DATA DESCRIPTION

The values entered by the user should be stored in an array prior to computation of the average value.

4 OUTPUT DESCRIPTION

Print the average value as described above to the console.

5 WHAT TO TURN IN

- Your code
- Multiple test cases
