

# Program Specification

Selection Sort

## 1 PROGRAM DESCRIPTION

---

Write a method that accepts an unsorted array as a parameter and sorts the elements using the Selection Sort Algorithm

## 2 INPUT DESCRIPTION

---

The method should accept a single parameter:

1. An array of double variables

## 3 OUTPUT DESCRIPTION

---

Create a driver class with a main method to exercise the Selection Sort method. Print the array before and after the method is called.

## 4 WHAT TO TURN IN

---

- Your code
- Multiple documented test cases
